

Inside: The detailed view shows the insulating accordion system of the Expansion Ribs®.

EXPANSION RIBS®

A highly flexible system of chambers and ducts unfolds with every movement. In them is stored warm air for insulation. The accordion principle of the Expansion Ribs® ensures you retain insulative attributes instead of losing them when you bend your elbows.

SEAMCLEAN TECHNOLOGY

Applying a new manufacturing process, this style can be made in one piece. That means no more seams. The fabric is continuous, allowing for a more uniform compression. Pressure is more comfortable and effective.

X-BIONIC® THERMO WINDOW

The thermo window on the inside of the arms disperses targeted heat. Moisture is transported immediately outwards via the fine knit mesh outwards.

X-IMPACT TECHNOLOGY

The unique X-Impact Technology by X-BIONIC® creates a perceptible pressure all over. The sensation stimulates body awareness without restricting freedom of movement or affecting fit. You move more precisely and more effectively, and your muscle performance improves.

\ BIKING \

ARM'S XQ-2 ENERGY ACCUMULATOR®

WITHOUT SEAMS. WITHOUT LIMITS.

➤ OPTIMIZED X-IMPACT EFFEKT.

On steep descents a freezing headwind can quickly chill your arms. The X-BIONIC® ARM'S XQ-2 Energy Accumulator® protects your muscles from the cold to avoid injuries. The high-tech knit technology of X-BIONIC® warms exactly where you need it since the arms lose warmth in specific areas. When the elbow bends, a system of chambers and ducts opens out like an accordion to maintain insulation. The Expansion Ribs® gain insulating attributes instead being pulled thin. Various knit structures distribute the sweat over a large surface across the arm. The thin film of perspiration evaporates and therefore cools. Excess sweat is immediately dispersed outwards via the ARM'S XQ-2 Energy Accumulator®. With the best temperature regulation, you'll bike with more energy.

④ AKTIV-BUND®

The Aktiv-Bund® adapts to any size arm without slipping or constricting.

⑤ AIR-CONDITIONING CHANNEL®

Is a ventilation system of channels that wrap around the body, continuously carrying away moisture and warmth. It allows air to flow to body regions not normally accessible by fresh air circulation.

⑥ AIR GUIDES®

Function like spacers along the Air-Conditioning Channel® to ensure a highly effective quantity and flow of fresh air.

SKIN NODOR®: HIGH-TECH DOWN TO THE SMALLEST ATOM

Inhibits bacterial growth and prevents unpleasant odour.

Skin NODOR®'s pH neutral ions actively inhibit bacteria buildup and minimize odour-causing microorganisms.
